

Marysville Blvd Vision Zero Safety Project Fact Sheet

Project Overview:

The Marysville Blvd Vision Zero Safety Project aims to significantly improve road safety for all users along Marysville Boulevard, from Arcade Boulevard to North Avenue. This initiative is part of the City of Sacramento's broader Vision Zero strategy to eliminate traffic fatalities and serious injuries by 2027.

Potential Project Features:

- **Road Diet:** Reducing travel lanes to calm traffic and enhance safety.
- **Protected Bike Lanes:** Upgrading existing bike lanes for safer cycling.
- **Pedestrian Safety:** Adding new pedestrian signals and controlled crossings.
- **Infrastructure Improvements:** Conducting pavement repair and sidewalk enhancements.

Community Concerns: Feedback from local resident's highlights concerns over aggressive driving, the need for safer pedestrian crossings, and the overall safety of cyclists and pedestrians along the corridor.

Community Concerns Identified: *(Vision Zero Top 5 Corridor Study Outreach Feedback)*

- **Visibility:** Residents described visibility issues due to skew of intersections and obstructions.
- **Signals/Signage:** Residents suggested that more signals or flashing beacons could help make it safer for pedestrians to cross the street.
- **Crossings:** Difficulty crossing the street as a pedestrian because crosswalks are far apart, and drivers do not pay attention when pedestrians are present.
- **Speed:** It was shared that some drivers travel a high speeds and drive aggressively along Marysville Boulevard.

Current Status: The project is in the preliminary design phase, with efforts underway to begin environmental clearance. Community input is being sought to inform the design and implementation process.

Get Involved: The city values community input and offers various channels for residents to contribute their views, including community meetings, online surveys, and email updates.
